**Photogrammetric Applications for Cultural Heritage** JON. BEDFORD 2017-10-31 This guidance covers the practical application of photogrammetry in recording cultural heritage, with particular reference to structure from motion (SfM) techniques. Our audience for this document includes survey contractors, archaeological contractors, voluntary organisations and specialists. Photogrammetric image acquisition and processing, until recently requiring a considerable investment in

hardware and software, are now possible at a fraction of their former cost. This has led to a huge increase in the use of photogrammetry in cultural heritage recording. The skills required to apply the techniques successfully and accurately are discussed, and background information on how various parts of the process work is provided so that better results can be achieved through better understanding. Photogrammetry is characterised by its versatility, and is applicable over a wide range of scales, from landscapes to small objects. The particular requirements needed at these different scales are outlined, and both imaging techniques and useful ancillary equipment are described. The different types of outputs are discussed, including their suitability for further interrogation using a range of established analytical techniques and the presentation options available. A range of case studies illustrates the application of photogrammetry across a variety of projects that broadly reflect the areas discussed in the text. This document is one of a number of Historic England technical advice documents on how to survey historic places.

**Bidong Island** Ong Meng Chuan 2022 Bidong Island is a small island located in the South China Sea, and is about 14 km from mainland Peninsular Malaysia. The island and the Bidong archipelago boast of its richness in diversity of both terrestrial and marine organisms and its undeniably pristine and thriving ecosystem. In 1975-1990, Bidong Island was formerly a UNHCR refugee camp for a quarter of a million Vietnamese "Boat people" escaping the Vietnam War, and still holds great significance to many of its descendants. Due to its historical significance, the Terengganu State government plans to develop Bidong Island as a heritage tourism site and a new scuba diving destination. This book highlights the uniqueness of Bidong Island and its archipelago, paying particular attention to the biological aspect (which includes marine and terrestrial organisms) and the pollution status surrounding the island. These mainly focus on organisms of the open water and benthic ecosystems such as plankton, fishes, corals reef communities, crustaceans and foraminifera. In addition, we discuss terrene related topics, which includes tree diversity, lichens and also herpetofauna surrounding the Bidong Island. Indisputably an important topic, we also address the pollution status surrounding Bidong Island, with emphasis on heavy metals and its impact. Readers interested in the areas of environmental sciences should find this book appealing. This book can also be used by students and researchers when discussing about tropical environments on island ecosystems. We do hope that stakeholders that would partake in future interest of Bidong Island (particularly in tourism) are equally aware of the current health status of the island and would engage in conserving and sustaining the diversity and heritage of the archipelago for the benefit of the community. .

**Piloting Palm** Andrea Butter 2002-03-04 The definitive behind-the-scenes story of the visionary team that launched the handheld industry. Palm insider Andrea Butter and New York Times columnist David Pogue -- with full, exclusive cooperation of the company's founders and more than fifty key Palm and Handspring executives -- tell the riveting tale of the start of an industry constantly in the headlines. The origins of this volatile industry began with the tiny team who beat staggering odds to turn the PalmPilot into a billion-dollar market and later took their ultimate vision to Handspring, now Palm's most powerful rival. Many of today's current events relating to the competition in this industry are forecasted in this important business drama. The authors take an unprecedented look at how the visionary founders of the industry led one of the most successful startups in history to succeed against all odds--including a shoestring budget, shortsighted corporate partners, and competition from Microsoft. The roller-coaster ride is full of insight into the bungles of venture capitalists, the allure and pitfalls of partnerships with giant corporations, and the steely determination needed to maintain entrepreneurial and visionary independence. With gripping accounts of the last-minute crises that almost torpedoed the PalmPilot on the eve of its unveiling, and the triumphant, unprecedented reception of Palm in the marketplace, as well as the glimpses into the future of this industry, this book is as entertaining as it is instructional. Key revelations include: \* The principles of business, economy, and product design that led Palm to succeed where billion-dollar corporations like Apple, Motorola, and Casio had failed. \* Important moments in technological development of the handheld such as the secret "Easter

egg," a software surprise planted in the Palm software that nearly sank launch plans. \* Unique insight into the showdown with Microsoft, and 3Com's tragic decision not to make Palm independent that led Palm's founder Jeff Hanwkins and CEO Donna Dubinsky to take their vision elsewhere. \* The ongoing competition between Palm and Handspring. The new rivals to contend with including Sony.
